Biodiesel Economics

Jon H. Van Gerpen

Biological and Agricultural Engineering University of Idaho, Moscow, ID, USA

Oilseeds and Biodiesel Workshop Polson, MT October 30, 2007

Cost estimation- Three Questions

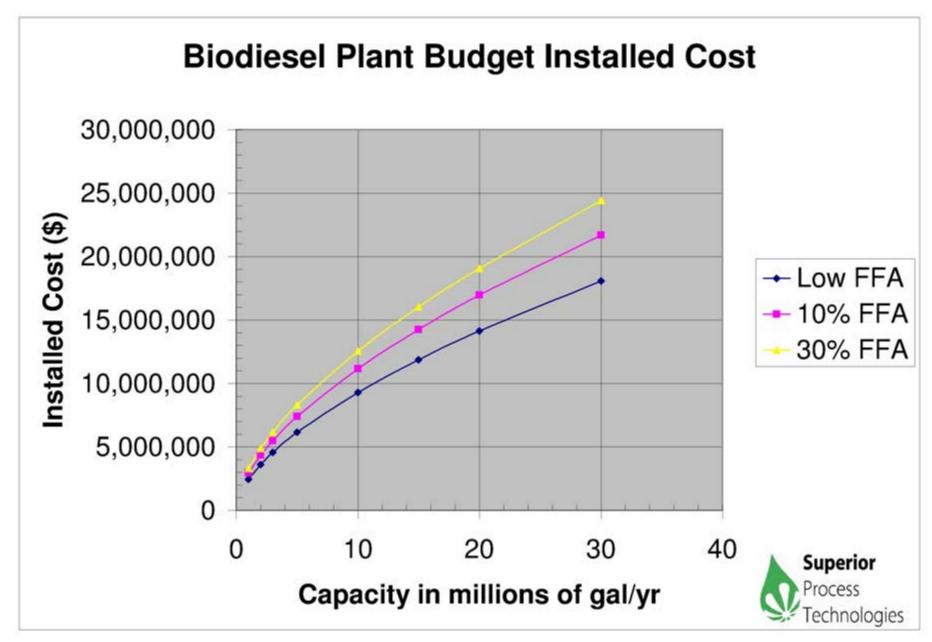

- 1. What does a biodiesel plant cost?
- 2. What will it cost you to produce the biodiesel?
- 3. How does your production cost relate to selling price?

Plant Cost- Buy

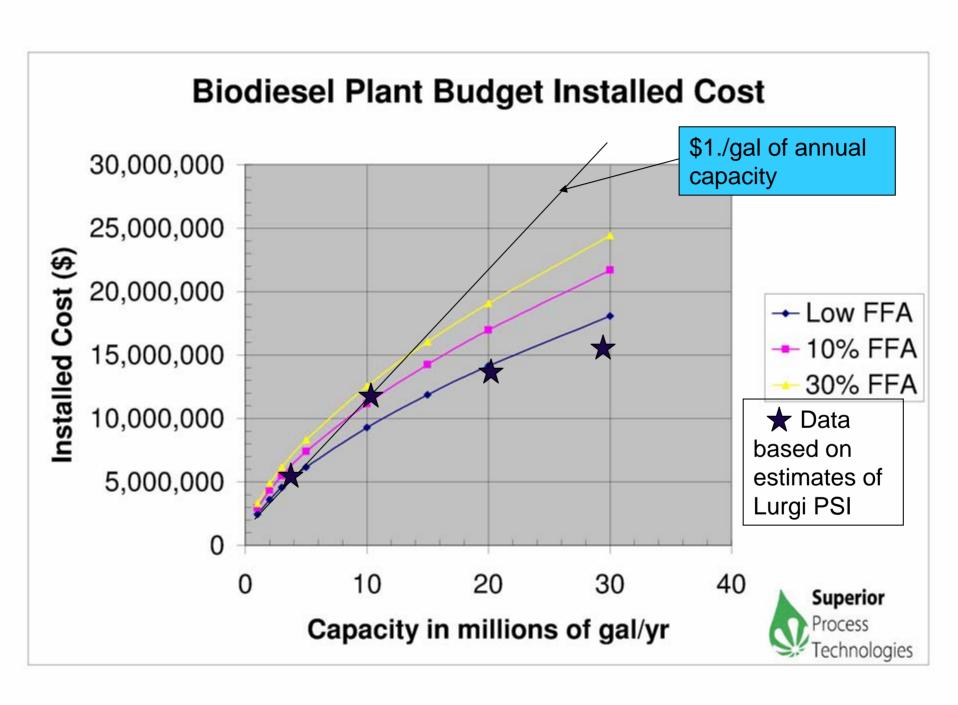

- Are you going to buy a turn-key plant from a technology provider such as Lurgi, REG, Crown, Superior Process, etc.?
 - Most expensive but quickest option.
 - If it is their first plant, you should expect a substantial discount.

Plant cost- Build Your Own

- Are you going to design and build your own plant?
 - Least expensive (maybe) but longest time due to need for development.
 - Should be able to take advantage of used or existing equipment.
- Some combination of these two options.

Add about 20% to cost due to rise in steel prices, 10/07

Biodiesel Production Cost

	(5 million gallon plant)	
	Unit Cost	\$/gal
Oil	\$0.38/lb	\$2.85
Methanol	\$1.15/gal	\$0.14
Catalyst (25% NaOCH	l ₃) \$0.55/lb	\$0.08
Neutralizer (HCI)	\$0.08/lb	\$0.01
Nat. gas + electricity	\$9./mmbtu, \$0.05/kwh	\$0.02
Labor	1 shift, 5 people	\$0.04
Depreciation/interest	10 yr/6%	\$0.15
Maintenance	3.8% of plant	\$0.04
Admin. + overhead		<u>\$0.02</u>

(5 million gallon plant)

Total:

\$3.35

Note that the oil is 85% of production cost, infrastructure is only 5% of production cost. Production cost is \$0.50/gal + oil.

Biodiesel Retail cost

Producer		
Production cost	\$3.35/gallon	
Producer profit	\$0.00	• A square os CCC mas sucre
Small producer tax credit	-\$0.10	 Assumes CCC program
CCC credit	0	expires in 2006.
Transportation	<u>\$0.08</u>	1
Distributor purchase price	\$3.33	 Assumes no credit for
Distributor/blender		
Purchase price	\$3.33/gallon	glycerin.
	-\$1.00	
Idaho+Federal tax	\$0.494	With current incentives,
Freight	\$0.08	,
Blender profit	<u>\$0.05</u>	biodiesel should break even
Retailer purchase price	\$2.95	with diesel fuel when retail
Retailer		
Purchase price	\$2.95/gallon	prices are above
Retailer mark-up	<u>\$0.12</u>	\$3.07/gallon.
Retail price (B100)	\$3.07	Ψ3.07/8μΠοΠ.

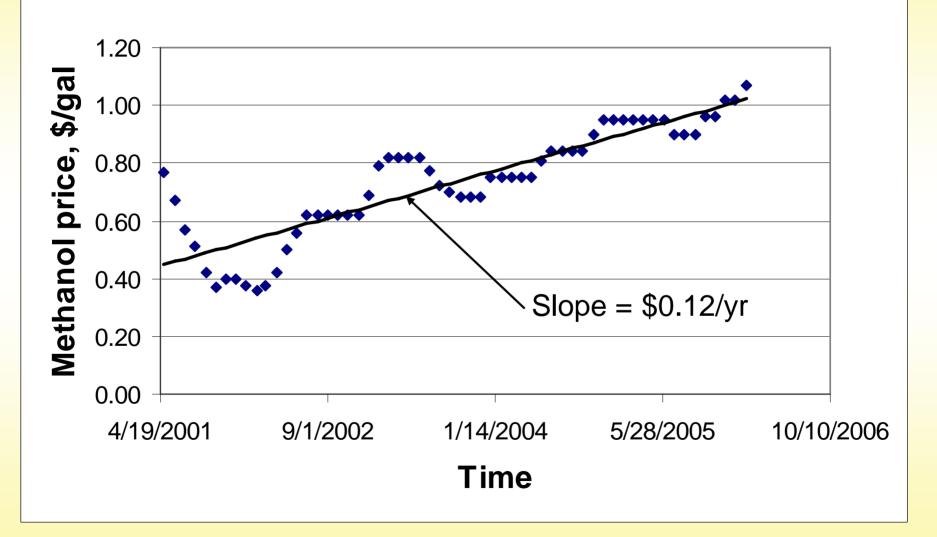

Oil Price

- Oil is difficult to find if you haven't locked in a supply.
- If you are already a crusher, the internal transfer price is a business issue relating to where the profits should appear.
- If you are buying oil, expect to pay CBOT price plus freight (\$0.01-0.03/lb).
- With recycled greases, collection and waste disposal costs mean the oil is not "free."

Methanol prices

- The reaction consumes about 0.11 lb methanol per lb of biodiesel.
- 0.11 x 7.3 lb/gal = 0.80 lb methanol/gal biodiesel
- 0.80 lb / 6.6 lb/gal methanol = 0.12 gal methanol per gallon of biodiesel
- 0.12 gal x \$1.15/gal = \$0.14/gal biodiesel
- But remember we are using 100% excess methanol. Can we recover all of this? This depends on your plant design.

Methanex Monthly average price

Catalyst

- Using 2% sodium methylate solution (25%)
 - If a lb of oil gives a lb of biodiesel and 1 gallon of biodiesel is 7.3 lb:
 - 7.3 lb/gallon x 0.02 lb cat/lb bio x \$0.55/lb cat
 - = \$0.08/gallon biodiesel
- Using 1% sodium hydroxide
 - 7.3 lb/gallon x 0.01 lb cat/lb bio x \$0.42/lb cat
 - = \$0.03/gallon biodiesel

Neutralizers and other production inputs

- Need to neutralize catalyst and split soaps.
 Typically use 1% HCl in water.
- Energy costs will depend on process but are usually small unless using high temperature processes (heterogeneous catalyst or supercritical).

Labor

- Estimate about 1 plant operator per million gallons.
- Half a manager per two employees. Try to leverage this with other businesses (soybean crushing, etc.)

For example:

- 2 employees @\$30K, 0.5 manager @\$50K
- \$85K/2 million gallons = \$0.04/gallon

Depreciation- Expensing the Assets

- Land can't be depreciated.
- Building might be 20 or 25 years.
- Equipment is typically 7 or 10 years.
- If a 10 million gallon, \$9 million plant is depreciated over 10 years, this is \$0.09/gallon.

Business Models

- Large centralized plant
 - Lower operating cost (main savings is labor and cost of capital)
 - More transportation cost
- Small decentralized plant
 - Higher operationing cost
 - Reduced transportation (It is quite feasible to make up for a \$0.10/gallon penalty on the plant operating cost with lower transportation costs)

Business Models

- Most plants try to leverage local advantages such as building next to an existing crush plant.
 - Close proximity to oil
 - Can share marketing, management, lab facilities
- Might also locate close to petroleum distribution or close to meal market.

Business Models

- Tying up an oil supply is important to weather current industry shake-out.
- Suggested approach:
 - Start by buying and reselling biodiesel in your area.
 - Is the market there? Make sure you can sell the product before you invest in making it.
